

CSS - word-break Property

This word-break property is used to specify how to break the word when the word reached at end of line. The line breaks in the text can occur in certain spaces, like when there is a space or a hyphen.

Syntax:

```
word-break: normal | break-all | keep-all | break-word | initial | inherit;
```

Properties: There are word-break property which are given below:

- normal
- break-all
- keep-all
- initial
- inherit

normal: This property uses the default line break rules.

Syntax:

```
word-break: normal (default value)
```

CSS - align-content property

The align-content property changes the behavior of the flex-wrap property. It aligns flex lines. It is used to specify the alignment between the lines inside a flexible container. This property defines how each flex line is aligned within a flexbox and it only applicable if flex-wrap: wrap is applied i.e. if there are multiple lines of flexbox items present.

List of align-content property:

- center
- stretch
- flex-start
- flex-end
- space-around
- space-between

center: Lines are placed on the center of flex container.

Syntax:

```
align-content:center;
```

CSS - LISTS

Two types of list exist in CSS i.e. Unordered lists and Ordered Lists

1. UNORDERED LISTS

In unordered lists, the list items are marked with bullets.

2. ORDERED LISTS

In ordered lists, the list items are marked with numbers and alphabet.

List Item Marker: This property specifies the type of item marker i.e. unordered list or ordered

Syntax:

```
list-style-type:value;
```

Now, the value can be following:

- circle
- decimal , eg :1,2,3,etc
- decimal-leading-zeroes , eg :01,02,03,04,etc
- lower-roman
- upper-roman
- lower-alpha, eg : a,b,c,etc
- upper-alpha, eg : A,B,C,etc
- square

List Marker Position: This property specifies the position of the list item marker. There are 2 types of position marker:

1. list-style-position: outside

In this, the bullet points will be outside the list item. The start of each line of the list will be aligned vertically.

2. list-style-position:inside

In this the bullet points will be inside the list. The line along with the bullet points will be aligned vertically.
